## Data Files

File
<b>phaeopigments_NBP-96-04A.csv</b> (Comma Separated Values (.csv), 17.36 KB) MD5:1531f22524625289fe0202c36051de53
Version August 23, 2001 (original version April 12, 1999) PI: Walker O. Smith of: Virginia Institute of Marine Science dataset: Fluorometric chlorophyll-a & phaeopigments project/cruise: AESOPS/NBP96-4A - Ross Sea Process Cruise 1 ship: Nathaniel B. Palmer

## File

### **phaeopigments\_NBP-97-01.csv** (Comma Separated Values (.csv), 20.04 KB)

MD5:a21cfa69a8aac078cdd1d8c34ce42980

Version August 23, 2001 (original version May 14, 1999)

PI: Walker O. Smith  
of: Virginia Institute of Marine Science  
dataset: Fluorometric chlorophyll-a & phaeopigments  
project/cruise: AESOPS/NBP-97-1 - Ross Sea Process Cruise 2  
ship: Nathaniel B. Palmer

DMO note (020423):

suspect event 01171933, sta 5, cast 8,  
data reported from bottle 1; bottle was  
tripped at 20 dbars (not 30 as reported).

suspect event 01190310, sta 7, cast 2,  
data reported from bottle 5 was most likely  
from bottle 4 (tripped at 9.9 db).

### **phaeopigments\_NBP-97-03.csv** (Comma Separated Values (.csv), 11.40 KB)

## Parameters

Parameter	Description	Units
event	event number from event log	
sta	station number from event log	
cast	cast number	
cast_type	CTD = CTD rosette TM = trace metal rosette	
bot	bottle number	
depth_n	nominal depth	meters
Fo_to_Fa	ratio of fluorometer readings, where: Fo = sample reading before acidification Fa = sample reading after acidification	
chl_a_fluor	chlorophyll-a, fluorometric method	micrograms/liter
phaeo	phaeopigments, fluorometric method	micrograms/liter

[ [table of contents](#) | [back to top](#) ]

## Instruments

<b>Dataset-specific Instrument Name</b>	Niskin Bottle
<b>Generic Instrument Name</b>	Niskin bottle
<b>Dataset-specific Description</b>	CTD clean rosette (Niskin) bottles were used to collect water samples
<b>Generic Instrument Description</b>	A Niskin bottle (a next generation water sampler based on the Nansen bottle) is a cylindrical, non-metallic water collection device with stoppers at both ends. The bottles can be attached individually on a hydrowire or deployed in 12, 24, or 36 bottle Rosette systems mounted on a frame and combined with a CTD. Niskin bottles are used to collect discrete water samples for a range of measurements including pigments, nutrients, plankton, etc.

<b>Dataset-specific Instrument Name</b>	Trace Metal Bottle
<b>Generic Instrument Name</b>	Trace Metal Bottle
<b>Dataset-specific Description</b>	Trace metal (TM) clean rosette bottles were used to collect water samples.
<b>Generic Instrument Description</b>	Trace metal (TM) clean rosette bottle used for collecting trace metal clean seawater samples.

## Project Information

### U.S. JGOFS Antarctic Environment and Southern Ocean Process Study (AESOPS)

**Website:** <http://usjgofs.who.edu/research/aesops.html>

**Coverage:** Southern Ocean, Ross Sea

The U.S. Southern Ocean JGOFS program, called Antarctic Environment and Southern Ocean Process Study (AESOPS), began in August 1996 and continued through March 1998. The U.S. JGOFS AESOPS program focused on two regions in the Southern Ocean: an east/west section of the Ross-Sea continental shelf along 76.5°S, and a second north/south section of the Southern Ocean spanning the Antarctic Circumpolar Current (ACC) at ~170°W (identified as the Polar Front). The science program, coordinated by Antarctic Support Associates (ASA), comprised eleven cruises using the R.V.I.B Nathaniel B. Palmer and R/V Roger Revelle as observational platforms and for deployment and recovery of instrumented moorings and sediment-trap arrays. The Ross-Sea region was occupied on six occasions and the Polar Front five times. Mapping data were obtained from SeaSoar, ADCP, and bathymetric systems. Satellite coverage was provided by the NASA SeaWiFS and the NOAA/NASA Pathfinder programs.

## Program Information

### U.S. Joint Global Ocean Flux Study (U.S. JGOFS)

**Website:** <http://usjgofs.who.edu/>

**Coverage:** Global

The United States Joint Global Ocean Flux Study was a national component of international JGOFS and an integral part of global climate change research.

The U.S. launched the Joint Global Ocean Flux Study (JGOFS) in the late 1980s to study the ocean carbon cycle. An ambitious goal was set to understand the controls on the concentrations and fluxes of carbon and associated nutrients in the ocean. A new field of ocean biogeochemistry emerged with an emphasis on quality measurements of carbon system parameters and interdisciplinary field studies of the biological, chemical and physical process which control the ocean carbon cycle. As we studied ocean biogeochemistry, we learned that our simple views of carbon uptake and transport were severely limited, and a new "wave" of ocean science was born. U.S. JGOFS has been supported primarily by the U.S. National Science Foundation in collaboration with the National Oceanic and Atmospheric Administration, the National Aeronautics and Space Administration, the Department of Energy and the Office of Naval Research. U.S. JGOFS, ended in 2005 with the conclusion of the Synthesis and Modeling Project (SMP).
