

DATA MANAGEMENT PLAN

The proposed work will generate laboratory data and field data. All data will be shared or made available according to guidelines stipulated by NSF OCE Data and Sample Policy.

Laboratory Data

Laboratory data will primarily consist of calibration measurements, and as preliminary or system specific data, are not necessarily reportable. However, calibration data will be reported along with any field measurements in an open access methods paper.

Field Data

Radionuclide measurements of ^{210}Pb , ^{210}Bi , and ^{210}Po in rain, and water column samples will be reported to the Biological and Chemical Oceanography Data Management Office (BCO-DMO). The PI will work with BCO-DMO staff to manage the data for possible inclusion in the BCO-DMO system. It is intended that all field data will also be published in an open access methods paper.
