GEOSPATIAL ACCESS

Dataset: CTD Profiles - KM1013

[Get Data](#)[Map It](#)

Project: Quorum-sensing and the Carbon Cycle: Identifying Cell-density Dependent Organic Carbon Degradation among Marine Bacteria in Sinking Particles (Quorum-sensing and the Carbon Cycle)

Principal Investigator:

[Dr Benjamin Van Mooy](#) (Woods Hole Oceanographic Institution, WHOI)

BCO-DMO Data Manager:

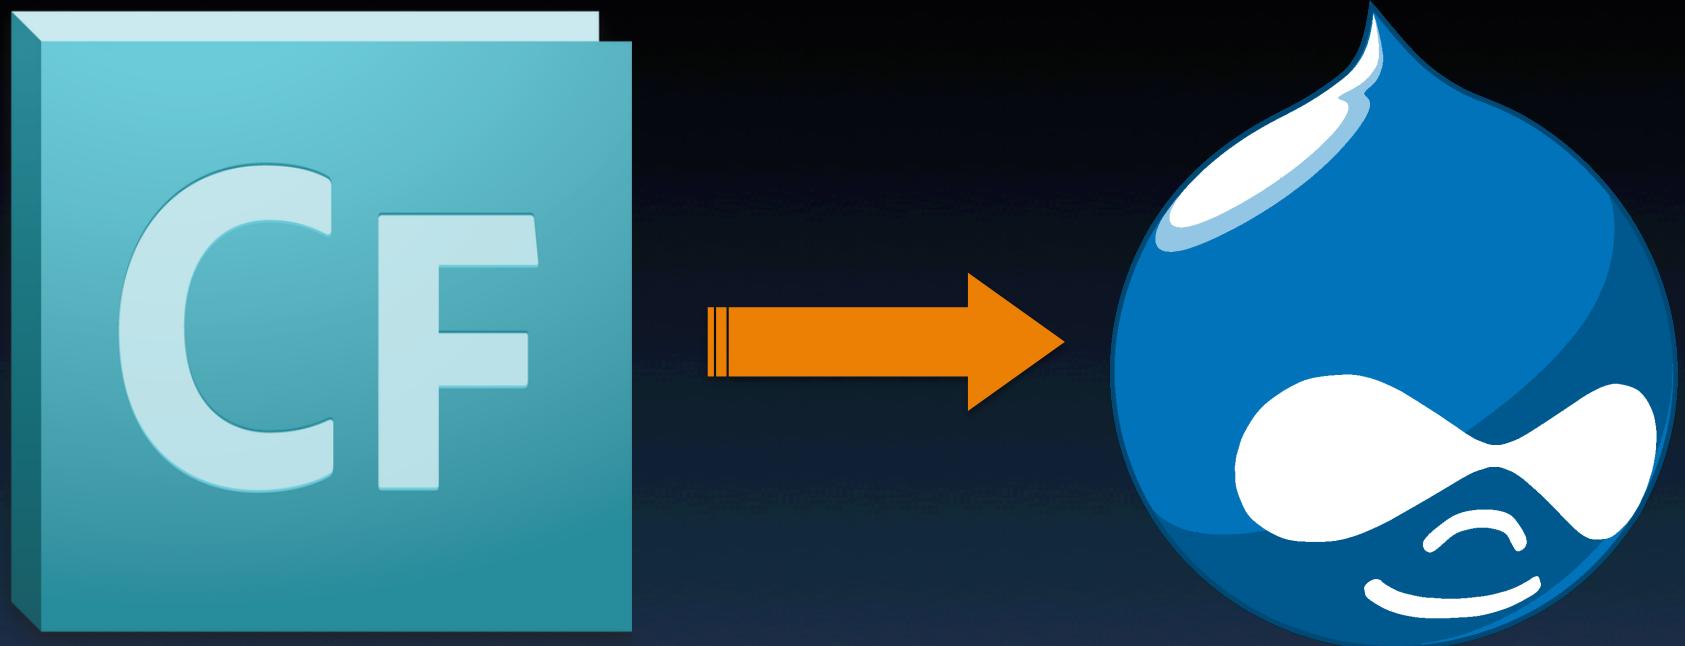

[Theresa McKee](#) (Woods Hole Oceanographic Institution, WHOI BCO-DMO)

Validated: Yes**Data version:** 12 January 2012**Version Date:** 01/12/2012**Current State:** Cruise complete[Expand/Collapse All](#)▼ **Description**

One decibar-averaged CTD profiles from cruise KM1013

BCO-DMO Metadata Database

the

BILLION DOLLAR QUESTION

How do we develop long-term systems that
keep maintenance costs low
and reward us with time
with limited development resources ?

IT Automation

Loose Coupling

SEE OUR WEBSITE FOR LOTS OF VINTAGE GEAR!

PHILIPS

Loose Coupling in Software

System A

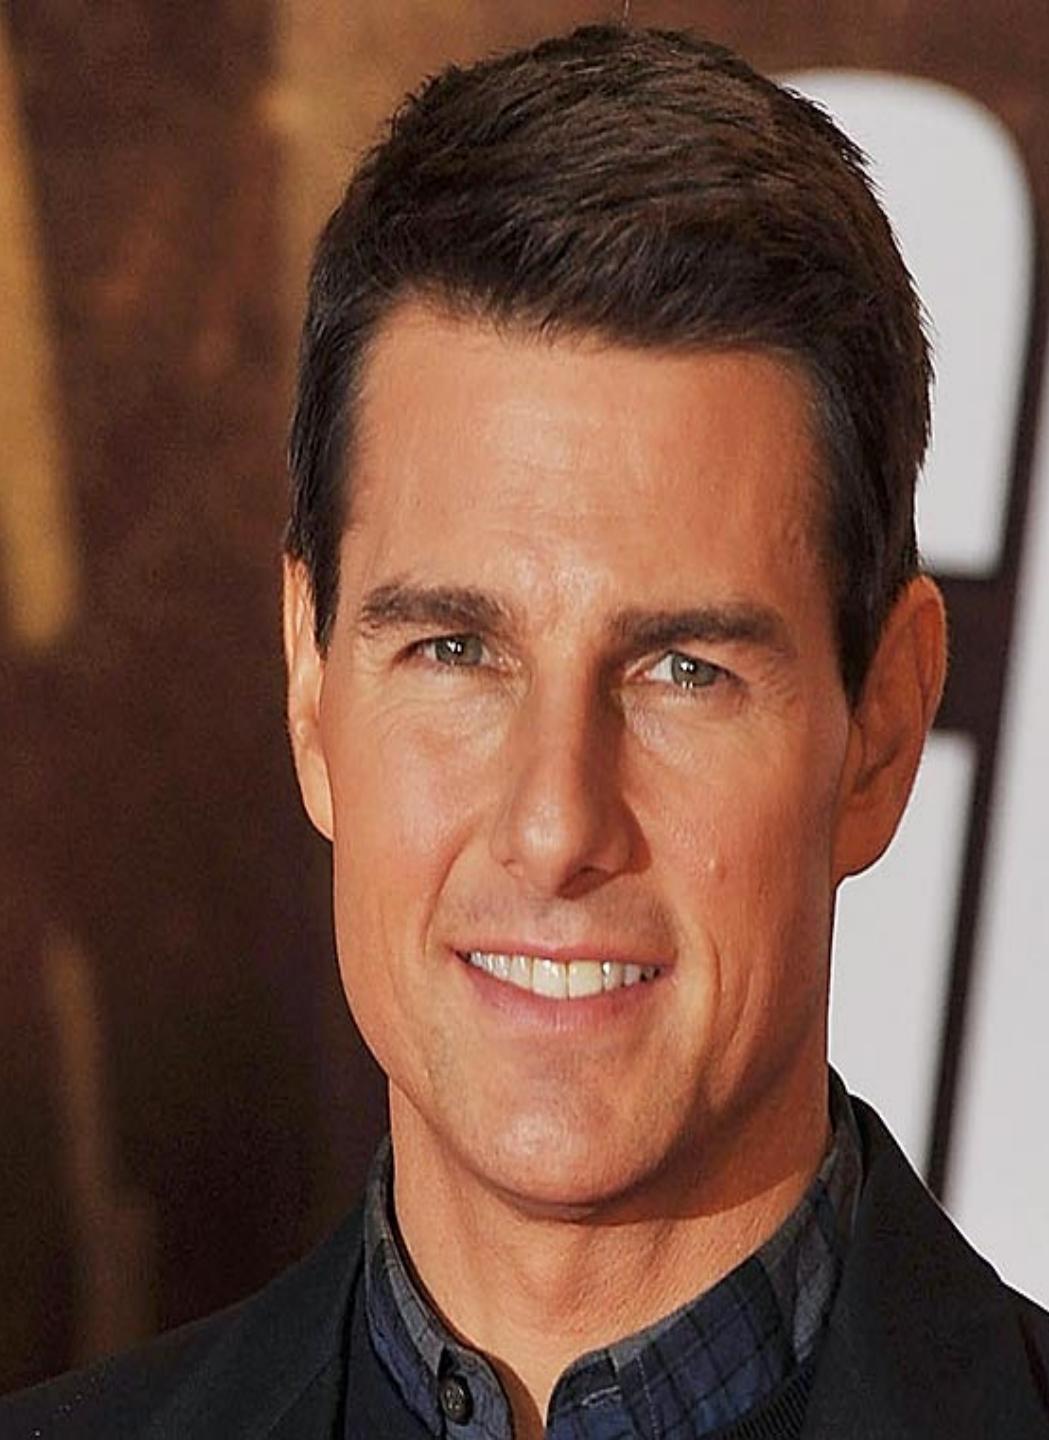

```
data = getData();
```

System B

```
function getData()  
{ /* send some data */ }
```

Forms of Loose Coupling:

- Wrappers (Functions, OOP Interfaces)
- APIs, Libraries (Web Services, *Hibernate*, etc.)

Tight Coupling in Software

```
SystemA.getData(SystemB)
```

```
{
```

```
    SystemB.getData(  
        "SELECT *  
        FROM  
            datasets d,  
            parameter p  
        WHERE  
            p.dataset = d.id  
        AND      d.id = ?"  
    );
```

```
}
```

- System B **exposes its database**
- System A ***dependent*** on System B ***not changing***

Loose Coupling

Sustainability requires **flexibility**

- Plug-n-play *better* components
- Isolates dependencies
 - Track down **bugs** faster
 - Faster **code alterations**
 - Easier **unit** tests

How do we loosely couple?

1. Identify code candidates

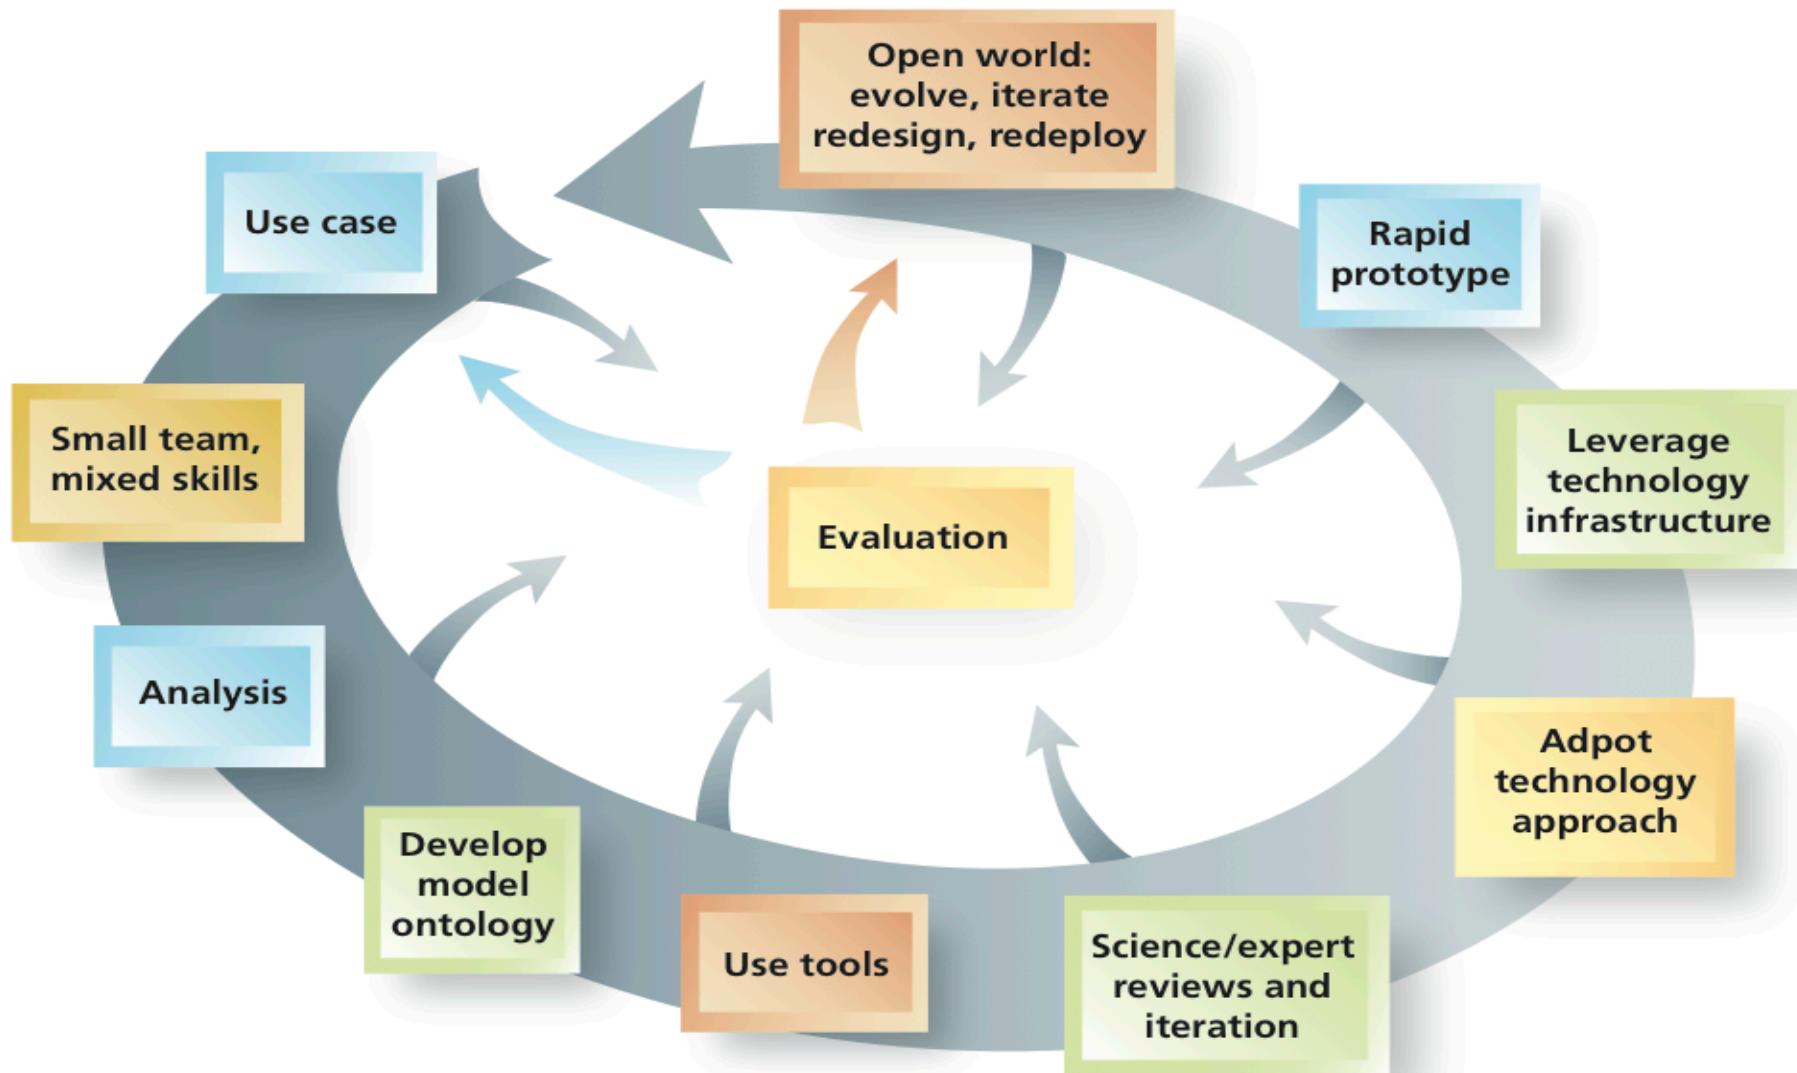

- volatility
- splatter

2. Prioritize

- future impact
- Abstraction: for *better* or for *worse* ?

Semantic Web Methodology & Technology Development Process

- ▶ Establish and improve a well-defined methodology vision for semantic technology based on application development
- ▶ Leverage controlled vocabularies, etc.

Likely Candidate

USE CASE: “We want to start recording research themes”

Translation: “We want to change the DB schema”

- Volatility: HIGH
- Splatter: LOW
- Future impact: HIGH
- Better/Worse: BETTER

Unlikely Candidate

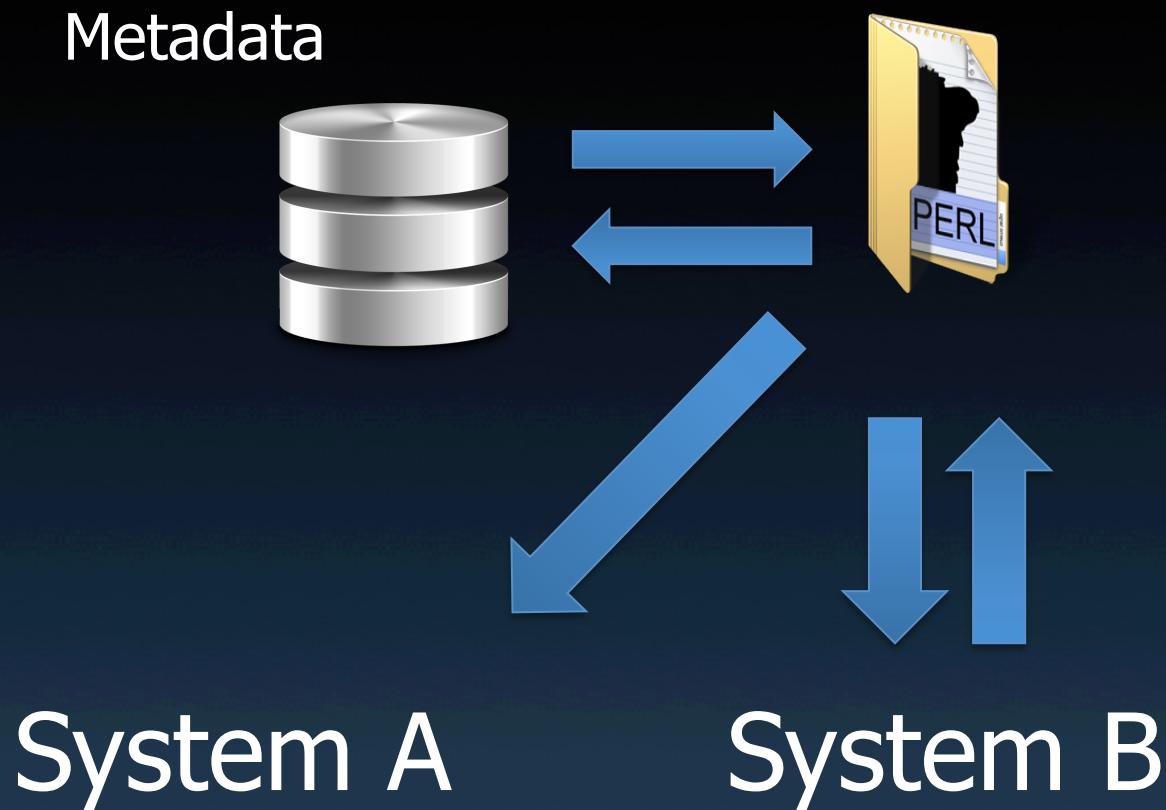

20+ native SQL queries

- Volatility: MEDIUM
- Splatter: LOW
- Future impact: LOW

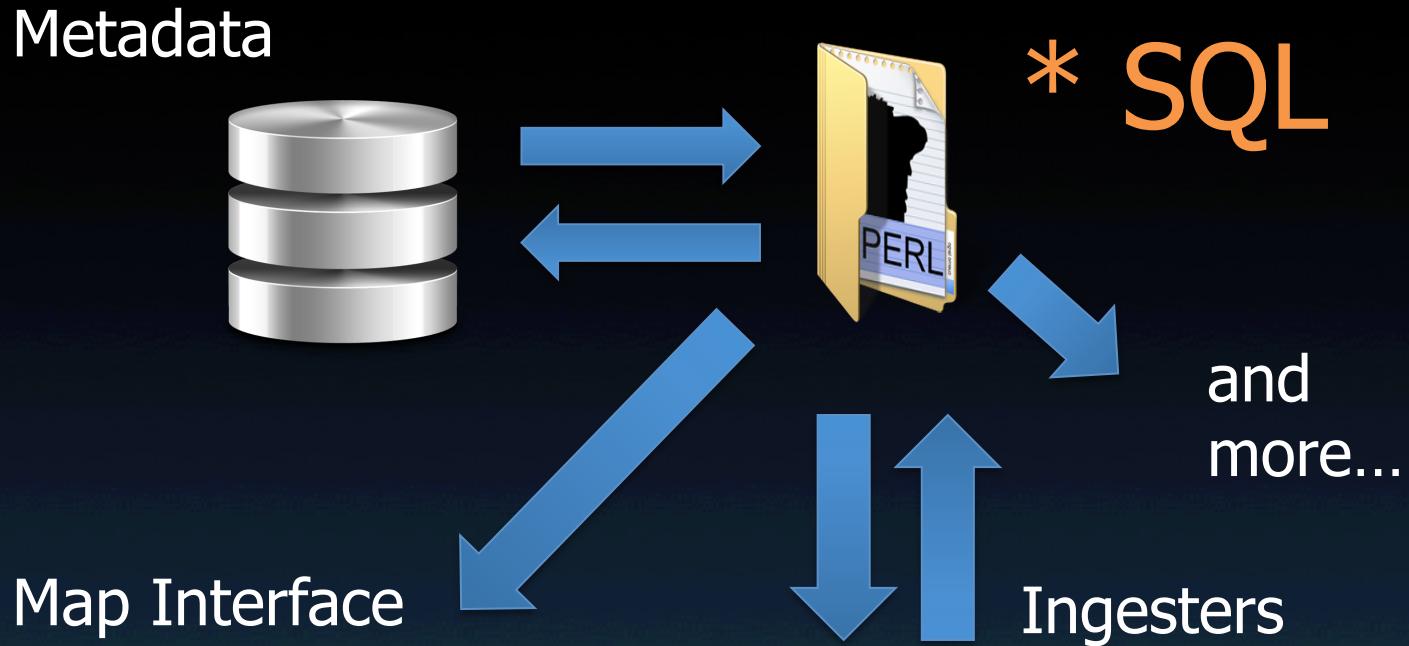

Group & Document Dependents

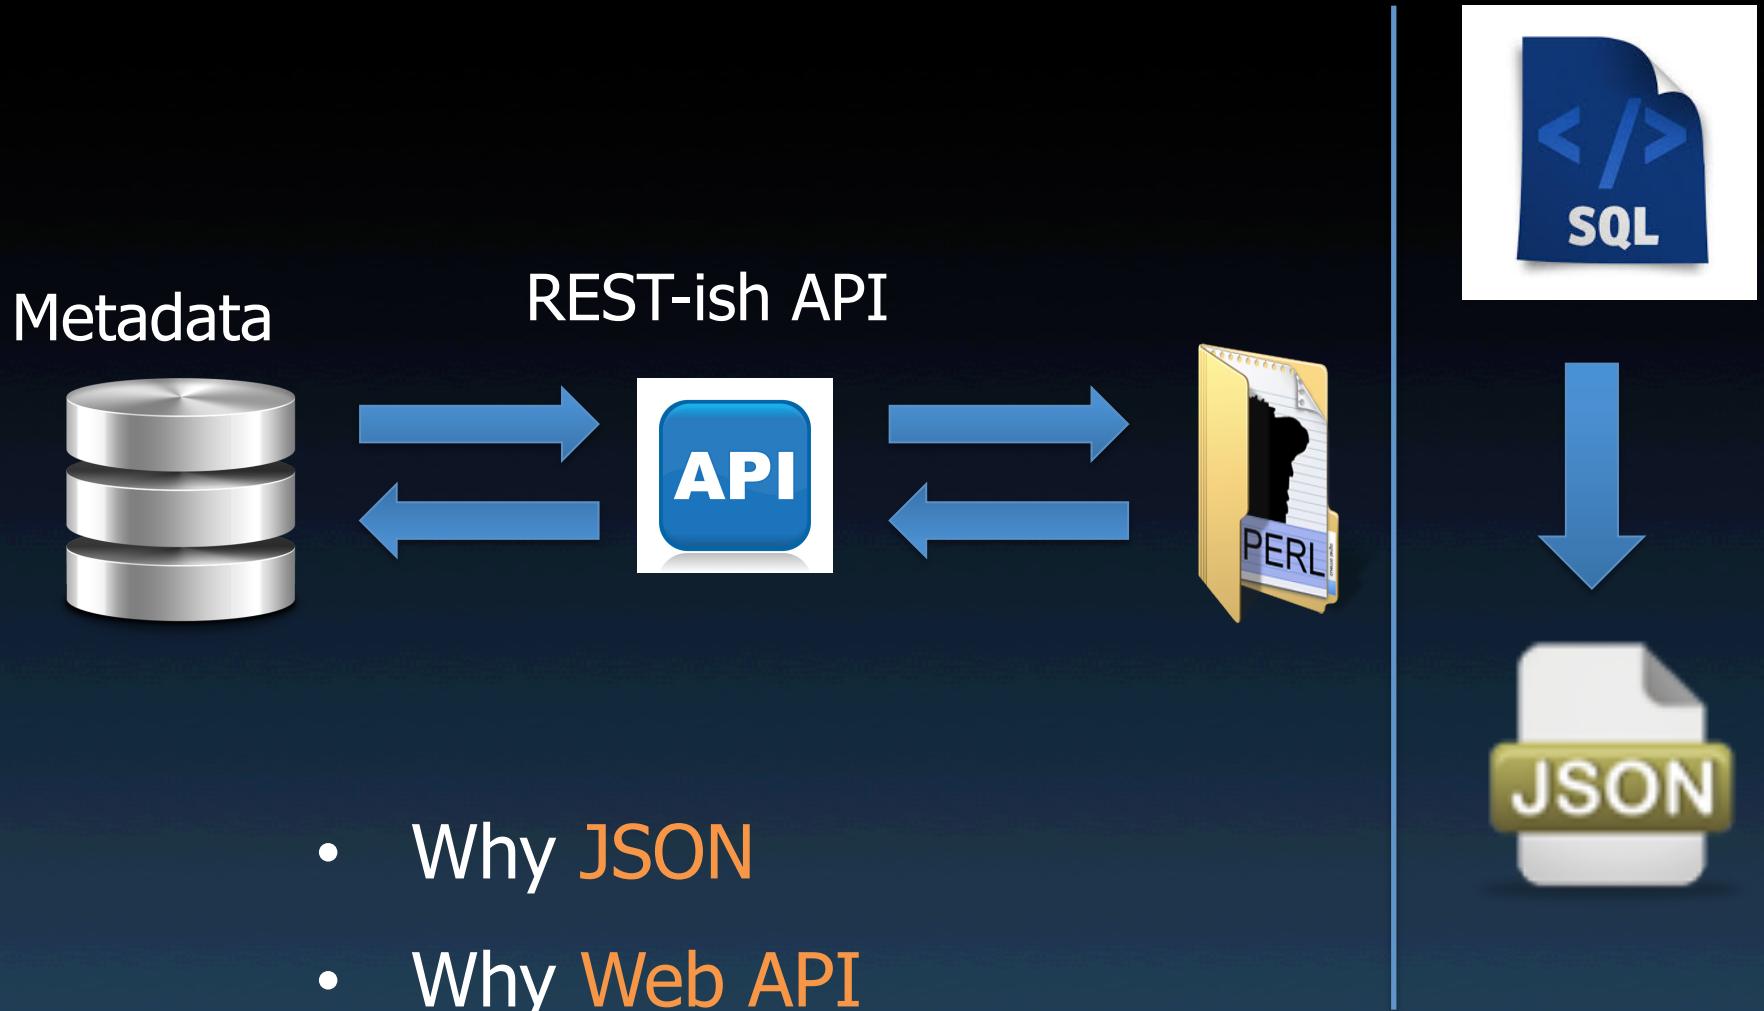

Situation: BCO-DMO

Situation: BCO-DMO

Data Delivery Processes

How do we innovate?

Select *time-tested*, successful mechanisms

Successful *means*:

community adoption

readily accessible tools

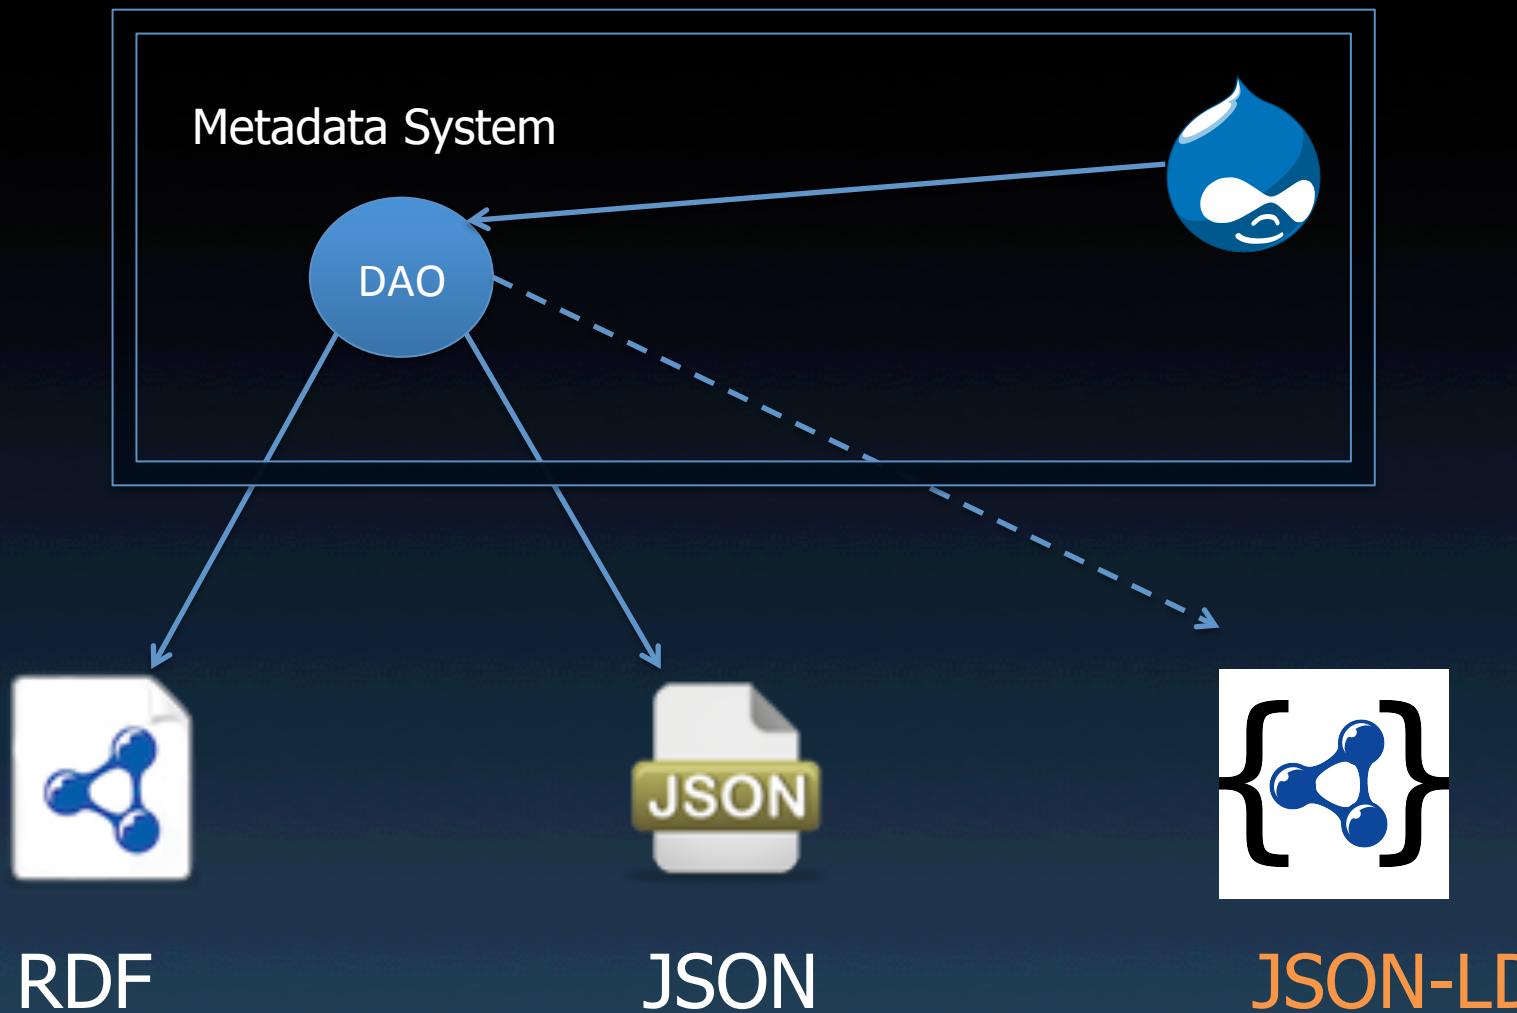

The Oscar goes to...

- Human Users
 - Structured content HTML
 - Content display CSS
 - Interactive content JS
- Machine Users
 - Syndicated content RSS
 - Data exchange JSON
 - Semantic data exchange ???

JSON-LD *

- JSON APIs become fully REST compliant
- Not disruptive to existing JSON
- Works with pre-existing parsers
- Not leveraging human platform
 - RDFa, microformats
- Google added JSON-LD support
 - Embedded HTML, Gmail actions

Going to the Bank

Sustainability is a choice you make
every day.

1. Loosely couple the *critical, at-risk* code
2. Innovate with *what works* about the Web
